

CSA1509-Cloud computing and Big Data Analytics

Name : DHILIBAN M

Reg.no: 192421166

EXP 12 : Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux).

Aim:

To demonstrate virtualization by installing Type-2 Hypervisor and to create and configure VM image with a Host Operating System .

Steps:

1. Download VMware software and install it as Type-2 Hypervisor.
2. Download Ubuntu or tiny os as ISO image file.
3. In VMware workstation → Create new VM
4. Do the basic configuration.
 - a. Change number of processors or memory size etc, if needed.
 - b. If extra hard disk is needed, double click on hard disk → add→additional hard disk.
5. Created a virtual Machine.
6. Launch the VM.

Implementation:

1. Download and open VMware software.

2. Create a new VM

Name it anything → click on next → Adjust the size of disk → change the option to first and then click on next.

Click on Finish to Launch .

3.VM is created

4. Double-click on each and Change the memory size , number of hard disks , number of processors if needed.

5. VM is created and configured.

EXP 13: Create a Virtual Machine with 1 CPU, 2GB RAM and 15GB storage disk using a Type 2 Virtualization Software.

Aim:

To Create a Virtual Machine with 1 CPU, 2GB RAM and 15GB storage disk.

Steps:

1. Download VMware software and install it as Type-2 Hypervisor.
2. Download Ubuntu or tiny OS as ISO image file.
3. In VMware workstation à Create new VM
4. Do the configuration based on given conditions.
 - a. Change number of processors to 1.
 - b. Change Memory to 2 GB and storage to 15 GB.
5. Created a virtual Machine.
6. Launch the VM.

Implementation:

- 1. Download and open VMware software.**

2. Create a new VM

Name it anythingàclick on nextàAdjust the size of disk à change the option to first and then click on next.

Click on Finish to Launch .

3. VM is created

4. Double-click on processors and Change number of Processors.

5. Click on hard disk and Change storage of hard disk.

5. Click on memory and change size of the memory

6. VM is created according to the conditions given.

EXP 14 : Create a Virtual Hard Disk and allocate the storage using VM ware Workstation.

Aim:

To Create a Virtual Hard Disk and allocate the storage using VM ware Workstation.

Steps:

1. Download VMware software and install it as Type-2 Hypervisor.
2. Download Ubuntu or tiny os as ISO image file.
3. In VMware workstation → Create new VM
4. Do the configuration based on given conditions.
 - a. Add extra Hard disk and allocate Storage to it.
5. Created a virtual Machine.
6. Launch the VM.

Implementation:

1. Download and open VMware software.

2. Create a new VM

WORKSTATION PRO™ 17

WORKSTATION PRO™ 17

Name it anything → click on next → Adjust the size of disk → change the option to first and then click on next.

WORKSTATION PRO™ 17

Click on Finish to Launch .

3. VM is created

4. Double-click on Hard disk and Click on add and create a new Hard disk

6. VM is created according to the conditions given.

EXP 15 : Create a Snapshot of a VM and Test it by loading the Previous

Version/Cloned VM

Aim:

To Create a Snapshot of a VM and Test it by loading the Previous

Version/Cloned VM.

Steps:

1. Download VMware software and install it as Type-2 Hypervisor.
2. Download Ubuntu or tiny os as ISO image file.
3. In VMware workstation → Create new VM
4. Do the configuration based on given conditions.
 - a. Add extra Hard disk and allocate Storage to it.
5. Create VM
6. Go to VM → Click on Snapshot → Take snapshot.
7. We can create n number of Snapshots and can be view through snapshot Manager.
8. Launch the VM.

Implementation:

1. Download and open VMware software.

2. Create a new VM

Name it anything → click on next → Adjust the size of disk → change the option to first and then click on next.

Click on Finish to Launch .

3. VM is created

4. Create Snapshot

5. View Snapshot

EXP 16:- Create a Cloning of a VM and Test it by loading the Previous Version/Cloned VM

Aim:

To Create a Cloning of a VM and Test it by loading the Previous Version/Cloned VM.

Steps:

1. Download VMware software and install it as Type-2 Hypervisor.
2. Download Ubuntu or tiny os as ISO image file.
3. In VMware workstation → Create new VM
4. Do the configuration based on given conditions.
5. Create VM
6. Go to VM → Manage → Clone.
7. Launch the VM.

Implementation:

1. Download and open VMware software.

2. Create a new VM

WORKSTATION PRO™ 17

WORKSTATION PRO™ 17

Name it anything → click on next → Adjust the size of disk → change the option to first and then click on next.

WORKSTATION PRO™ 17

Click on Finish to Launch .

3.VM is created

4. Create Clone

Clone has Created and it has same properties as before VM.

EXP17- Change Hardware compatibility of a VM (Either by clone/create new one) which is already created and configured and run simple unix commands

Aim:

Change Hardware compatibility of a VM (Either by clone/create new one) which is already created and configured and run simple unix

Steps:

1. Download VMware software and install it as Type-2 Hypervisor.
2. Download Ubuntu or tiny OS as ISO image file.
3. In VMware workstation → Create new VM
4. Do the configuration based on given conditions.
5. Create VM
6. Go to VM → Manage → Clone.
7. A Orange color desktop will open, simple unix commands are performed.
8. Launch the VM.

Implementation:

1. Download and open VMware software.

2. Create a new VM

Fig : Name it anything → click on next → Adjust the size of disk → change the option to first and then click on next.

Fig: Click on Finish to Launch .

3.VM is created

4. Create Clone

Fig : SSClone has Created and it has same properties as before VM.

Fig : unix commands are performed
